Managing victimization risks attached to societal participation by people with severe mental illness; the Victoria-project

Yolanda Nijssen, Lies Korevaar, Diana Roeg, Roland van de Sande, Inge Bongers and Jaap van Weeghel

3rd European Congress on Assertive Outreach
24-26 juni 2015
Parties involved
Transition to community

- Shift to ambulant/community care
- Recovery in community
- ‘Participation society’
Severe Mental Illness
- Severe psychopathology
- Serious disabilities on several life domains
- NL: 1,7% of the total population (281,000)
- 75% receives care (56% MHC / Addiction), mainly community care
In community?

Disadvantaged position in terms of:
- physical health,
- income, employment (10-20% paid job)
- relationships (loneliness, victimization)
→ 35% traumatized, 6x more victim of violence and other crimes
Victimization

- Physical assault, threats of violence
- Crimes like burglary and robbery
- Discrimination, rejection
- (Anticipated) stigmatization
F-FACT-teams

- Flexible Assertive Community Treatment
- Multi-disciplinary, team approach
- Care coordination
- Symptom stabilization and personal / social recovery, change over attitude
- Dignity of risk!
Risk groups

- ‘High-risk group’, risks on several life domains, relapses, perpetrator and victim, no adequate participation/rehabilitation

- ‘Avoidant group’, stigmatization, no risks, no adequate participation/rehabilitation

- ‘In between’, participation/rehabilitation with sometimes victimization-experiences
Objective project

- Development of supportive intervention for FACT-teams,
- Elaborate victimization experiences and other adversities in societal participation with clients,
- Acknowledgment of experiences, recognition of risky situations, build experiential knowledge, prevent victimization and (re)discover personal goals
Methodology

- Focus groups and experts
- Barriers and solutions
- Victoria-modules on the ‘drawing board’
- Pilot phase in FACT-teams D&D/GGzE, feedback
- Working towards final version for RCT
Module 1

Steps:

- Description of (recent) victimization experience related to social participation (who, what, when, where, intensity)
- Causes (own behaviour, behaviour of others, circumstances)
- What went well, what did not, awareness and understanding
- Follow up, personal goals, strengths and possibilities
Module 2

Steps:
- Evaluate period of crisis
  (what, who, where, when, intensity)
- Causes (precursors, own behaviour, behaviour of others, circumstances), victimization?
- Consequences for social recovery
- Follow up, personal goals, strengths and possibilities
Summary

- Awareness of victimization experiences and risks.
- From problem orientation to focus on personal and social recovery, dignity of risk
- Acknowledgment and building experiential knowledge, empowerment
- Lead-up to treatment/rehabilitation, explore and follow up
- RCT
Adversity as turning point
